瑞施博格导轨

SWISSBERGER

有一种力量，引领时代。

有一种力量，推动历史。

有一种力量，改变世界。

不是所有的导轨品牌都叫瑞施博格

Not all rail brands are called swissberger

东莞市瑞施博格导轨制造有限公司成立于2006年，是一家专注精密交叉导轨、保持架、滚柱/针、滑台、模组系列产品研发、生产及销售的高科技企业。产品广泛应用于自动化设备、工业机器人、光电行业、测量仪、影像仪、医疗器械等高精密设备/仪器领域。公司总部坐落于广东省东莞市厚街镇，生产面积10000 m²(1万平米)现有职工200余人,机台设备完善，加工技术精湛，具备迅捷高效的大批量生产能力。

Dongguan swissberger Guide Rail Manufacturing Co., Ltd. was established in 2006 as a high-tech enterprise specializing in the research and development, production, and sales of precision cross guide rails, cages, rollers/needles, sliding tables, and module series products. The products are widely used in high-precision equipment/instruments such as automation equipment, industrial robots, optoelectronics industry, measuring instruments, imaging devices, medical devices, etc. The company's headquarters is located in Houjie Town, Dongguan City, Guangdong Province, with a production area of 10000 square metre (10000 square meters). Currently, there are more than 200 employees, complete machine equipment, exquisite processing technology, and fast and efficient mass production capacity.

瑞施博格凭借国际先进技术，一流服务水平，陆续与国内外众多行业翘楚建立战略合作关系,为客户产品竞争力提供强劲战略支撑。为客户持续性提供精密V型导轨的前期设计、样品开发、批量生产一站式解决方案，愿与新老客户共创辉煌灿烂的明天。

Relying on advanced international technology and first-class service standards, swissberger has successively established strategic cooperation relationships with numerous industry leaders at home and abroad, providing strong strategic support for customer product competitiveness. We are willing to provide customers with one-stop solutions for the preliminary design, sample development, and mass production of precision V-shaped guide rails. We are willing to work with new and old customers to create a brilliant tomorrow.

产品概述

结构及特点 / 交叉导轨的额度寿命/载荷计算

Product overview

Structure and features/Limit life/load calculation of cross rails

结构及特点

Compositions and Features

◎ 结构

交叉滚子导轨由两根具有V型滚道的导轨，滚柱保持架、圆柱滚子等组成，相互交叉排列的圆柱滚子在经过精密磨削的V型滚道面上做往复运动，可承受各个方面的载荷，实现高精度、平稳的直线运动。

◎ 特点

滚动摩擦阻力低，稳定性能好，起动摩擦力小，随动性能好；接触面积大，弹性变形量小，有效运动体多，易实现高刚性、高负荷运动，结构设计灵活，安装使用方便。

◎ Compositions

Firstly.assemble 2pcs of Rail A on the same base level of the sliding plate or base; Secondly.assemble 2pcs of Rail B on the same base level of the sliding plate or base.

◎ Features

Firstly.assemble 2pcs of Rail A on the same base level of the sliding plate or base; Secondly.assemble 2pcs of Rail B on the same base level of the sliding plate or base.

交叉滚子导轨的额定寿命

The Rated Lifespan of the Crossing Roller Guideway

◎ 额定寿命的计算

$$L = 50 \left(\frac{f_t}{f_w} \cdot \frac{C}{P_c} \right)^{10/3} (\text{Km})$$

◎ Lifespan Calculation

$$L = 50 \left(\frac{f_t}{f_w} \cdot \frac{C}{P_c} \right)^{10/3} (\text{Km})$$

式中：L - 额定寿命 f_t - 温度系数 f_w - 载荷系数

Remarks: L: Rated Lifespan; f_t: Temperature Coefficient;

C - 额定动载荷 P_c - 计算载荷

f_w: Load Coefficient; C: Rated Kinetic Load;

温度系数f_t: 当工作温度°C≤100时, f_t=1 载荷系数f_w

P: Load Calculation; When the working temperature°C≤100.

f_t=1; f_w: Load Coefficient

工作条件 Working condition	无外部冲击或震动的低速运动场合，速度 小于15m/min Low speed motion without external shock or vibration, speedLess than 15m/min	无明显冲击或震动的中速运动场合，速度 小于15-30m/min No significant impact or vibration of the medium speed of motion, speedLess than 15-30m/min
f _w	1~1.5	1.5~2.0

◎ 寿命时间的计算

$$L_h = \frac{L \times 10^3}{2 \times I \times n \times 60} \text{ (h)}$$

式中：L_h - 寿命时间 L - 额定寿命 I - 行程长度
n - 每分钟往复次数

◎ Lifespan Period Calculation

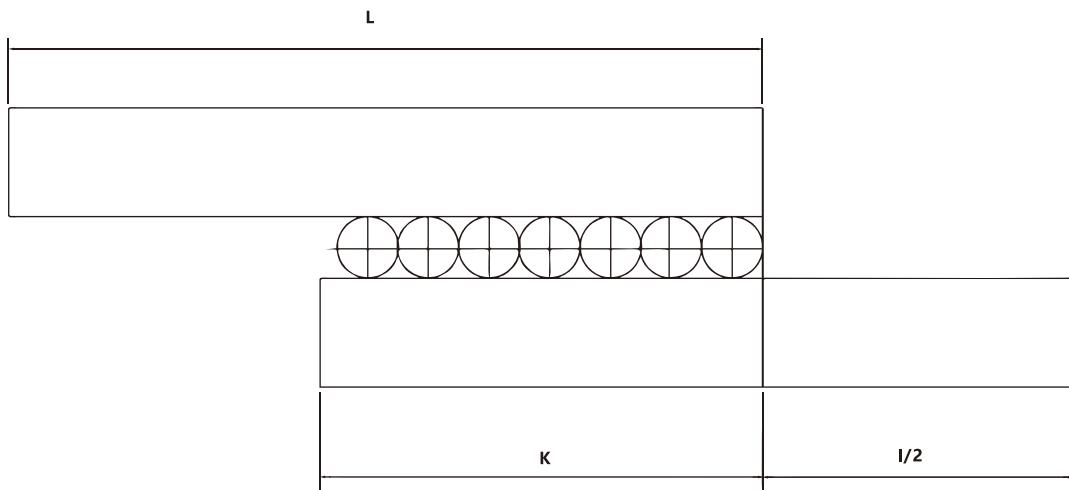

$$L_h = \frac{L \times 10^3}{2 \times I \times n \times 60} \text{ (h)}$$

Remarks: L_h: Lifespan Period; L: Rated Lifespan; I: Stroke Length; n: Round-trip Times per Minute

载荷计算 Load Calculation

◎ 行程长度及滚柱数量

◎ The Stroke Length and Roller Numbers

导轨长度计算

- 导轨的长度不小于行程的1.5倍: $L \geq 1.5I$

式中: L - 导轨长度(mm); I - 运行行程长度(mm)

- 保持架长度: $K \leq L - I/2$

式中: K - 保持架长度(mm)

- 滚柱数计算: $n = (K - 2a) / f + 1$

式中: n - 滚柱数量(忽略小数), a - 保持架端距, f - 滚柱间距

Guideway Length Calculation

- The guideway length is not less than 1.5 times of the stroke: $L \geq 1.5I$

Remarks: L: Guideway Length(mm); I: Stroke Length(mm)

- Cage's Length: $K \leq L - I/2$

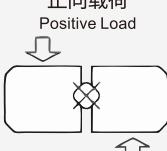

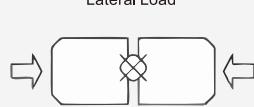

Remarks: K: Cage's Length(mm)

- Calculation of Roller Numbers: $n = (K-2a)/f + 1$

Remarks: n: Roller Numbers (the decimal part is ignored).
a : End to End Distance of the Cage f: Space between Rollers

◎ 载荷计算

◎ Load calculation

载荷方向 LOAD Direction	正向载荷 Positive Load 	侧向载荷 Lateral Load 
额定动载荷C Rated Kinetic Load C	$C = \left(\frac{n}{2}\right)^{1/4} C_1$	$C = \left(\frac{n}{2}\right)^{1/4} 2^{7/8} C_1$
额定静载荷 C_0 Rated Static Load C	$C_0 = \left(\frac{n}{2}\right) C_{01}$	$C_0 = 2 \times \left(\frac{n}{2}\right) C_{01}$

表中: C - 额定动载荷(KN) C_0 - 额定静载荷(KN)

C_1 - 每个滚柱的额定动载荷(KN)

C_{01} - 每个滚柱的额定静载荷(KN)

n - 滚柱数 n/2 - 滚柱数(忽略小数)

Remarks: C: Rated Kinetic Load (KN); C_0 : Rated Static Load (KN);

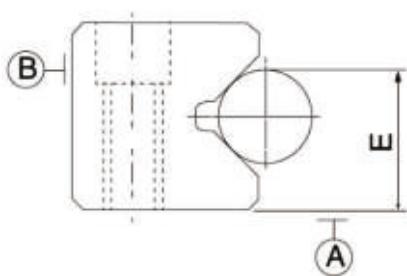

C_1 : Rated Kinetic Load of each roller(KN);

C_{01} : Rated Static Load of Each Roller (KN); n: Roller Numbers;

n/2 : Roller Numbers (the decimal part is ignored).

精度的选择

Precision Choice

精度等级 Precision Grades	精密级 Precision	超精密级 Ultra-precision
项目 Items	记号 Marks	P
导轨面对基准A、B的平行度 The Parallelism of Guideway Surface to Benchmark A&B	按上右图规定 As specified in the upper right picture	
高度E尺寸误差 Mutual Matching Difference of Height E	± 0.02	± 0.01
高度E相互配对误差 Height E mutual pairing error	0.02	0.01
注: 1. E=1/2名义高度+滚柱半径; 2. 高度相互配对是指同一台面上床身所需使用的4根导轨, 标注同一出厂编号。 Note: 1. E=1/2 nominal height + roller radius; 2. High mutual pairing refers to the 4 guides needed to use the bed on the same table, marked with the same factory number.		

» 交叉滚柱导轨安装说明

Installation Instructions for Cross Roller Guide

1、安装前检查并清理工作台，底座安装基面的毛刺和污垢等。注意在组装过程中不要混入异物。

2、配对同一标记(A或B)导轨2和3，按基准面紧靠底座凸台两侧安装基面，借助工具，确保两导轨平行安装侧面。用力矩扳手逐个拧螺钉，螺钉紧固需要按标准扭矩分多次逐步等力矩紧固，从中间开始按交叉顺序向两端。最终检测精度符合产品行走直线度要求

3、另一配对导轨1紧靠放置在工作台安装基面上，借助工具，确保导轨平行安装侧面。同样用力矩扳手逐个拧螺钉，螺钉紧固需要按标准扭矩分多次逐步等力矩紧固，从中间开始按交叉顺序向两端。

1. Before installation, check and clean the burr and dirt on the workbench and base mounting surface. Be careful not to mix foreign matters during assembly.

2. Pair guide rails 2 and 3 with the same mark (A or B), and install the base plane close to both sides of the base boss according to the base plane. With the help of tools, ensure that the two guide rails are installed side by side in parallel. Use a torque wrench to tighten the screws one by one. The screws shall be tightened with equal torque in multiple steps according to the standard torque, starting from the middle and starting from the cross to both ends. The final detection accuracy meets the requirements of product walking straightness.

3. The other pair of guide rails 1 is placed close to the installation base surface of the workbench. With the help of tools, ensure that the guide rails are parallel to the installation side. Also use a torque wrench to tighten the screws one by one. The screws should be tightened with equal torque in several steps according to the standard torque, starting from the middle and starting from the cross to both ends.

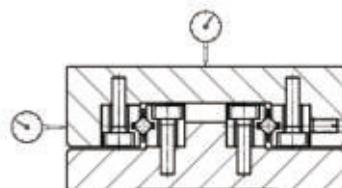

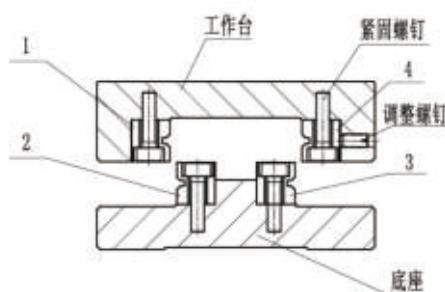

图1 交叉滚柱导轨副安装示意图

4、将调整侧的导轨4暂时固定在工作台上。

5、将底座与工作台按图1所示位置关系进行安装，滚柱保持架由端部插入。这时，保持架没有间隙插不进去时，可将调整侧的导轨4往调整螺钉侧挪动后插入。调整导轨4位置，左右推动工作台，确保保持架归位行程中间位置。

6、在导轨两端部安装挡头螺丝。

7、存在特殊情况，长配短导轨，或限位块在导轨中间不等分位置，装配确保滚柱保持架中线和要求行程的中间位置需要重合，短导轨中线和保持架中线位置需要重合。

4. Temporarily fix the guide rail 4 on the adjustment side on the workbench.

5. Install the base and workbench according to the position relationship shown in Figure 1, and insert the roller cage from the end. At this time, if the cage cannot be inserted without clearance, move the guide rail 4 on the adjustment side to the adjustment screw side and insert it. Adjust the position of guide rail 4, push the workbench left and right, and ensure that the cage returns to the middle of the stroke.

6. Install retaining screws at both ends of the guide rail.

7. Under special circumstances, the long guide rail is equipped with a short guide rail, or the limit block is located at an unequal position in the middle of the guide rail. The assembly ensures that the centerline of the roller cage and the middle position of the required stroke need to coincide, and the centerline of the short guide rail and the centerline of the cage need to coincide.

8、调整导轨4，要求分预调整和精调整两步。预调整轻微拧紧螺钉，左右推动工作台，用扭矩扳手均等地拧紧有滚子的范围内的调整螺钉，调整分多次，等力矩逐步调整。最后精调整，左右移动工作台，扭力扳手调小扭矩1/2再次调整多次。

9、最后紧固螺钉，从中间开始按交叉顺序向两端拧紧等扭矩分多次调整。

注：安装数个工作台时，测定第1台的调整螺钉的拧紧扭矩或滑动阻力，如果使第2台以后的拧紧扭矩或滑动阻力相同的话，那么就能施加大致相同的预压。

调整螺钉的推荐紧固扭矩 单位：N.m

Recommended tightening torque for adjusting screw unit: N.m

型号 Model	尺寸 Size	紧固扭矩 Tightening torque
V1	M2	0.008
V2	M3	0.012
V3	M4	0.05
V4	M4	0.08
V6	M5	0.20
V9	M6	0.40
V12	M6	0.80

(图2)
(figure 2)

8. Adjusting guide rail 4 requires two steps: Pre-adjust and slightly tighten the fastening screws, push the workbench to the left and right, and evenly tighten the adjusting screws within the range of rollers with a torque wrench. The adjustment shall be made in several times and gradually adjusted with equal torque. Finally fine adjustment, move the workbench left and right, and adjust the torque by $\frac{1}{2}$ with the torque wrench for several times.

9. Finally, Fastening screws from the middle to both ends in across sequence, and adjust the bolts in equal torque for several times.

Note: When installing several workbenches, measure the tightening torque or sliding resistance of the first set of adjusting screws. If the tightening torque or sliding resistance of the second set is the same, then approximately the same preload can be applied.

紧固螺钉的推荐紧固扭矩 单位：N.m

Recommended tightening torque for fastening screw unit: N.m

型号 Model	紧固扭矩 Tightening torque
M2	0.4
M3	1.4
M4	3.2
M5	6.6
M6	11.2
M8	27.6
M10	55.0

(图3) (使用合金钢制螺钉)
(figure 3)(Use alloy steel screws)

» 交叉滚柱导轨副使用注意事项

Precautions for use of cross roller guide rails

安装面的精度

配对安装面的精度直接影响滚柱交叉导轨副的运行精度和性能。为了获得高精度的行走精度，导轨安装面的平行度、平面度，希望经过研磨加工后，其精度高于导轨的最终运行精度。

Accuracy of mounting surface

The accuracy of the paired mounting surface directly affects the running accuracy and performance of the roller cross guide pair. In order to obtain high-precision walking accuracy, the parallelism and flatness of the mounting surface of the guide rail are expected to be higher than the final running accuracy of the guide rail after grinding.

◎ 普通交叉导轨的装配方法

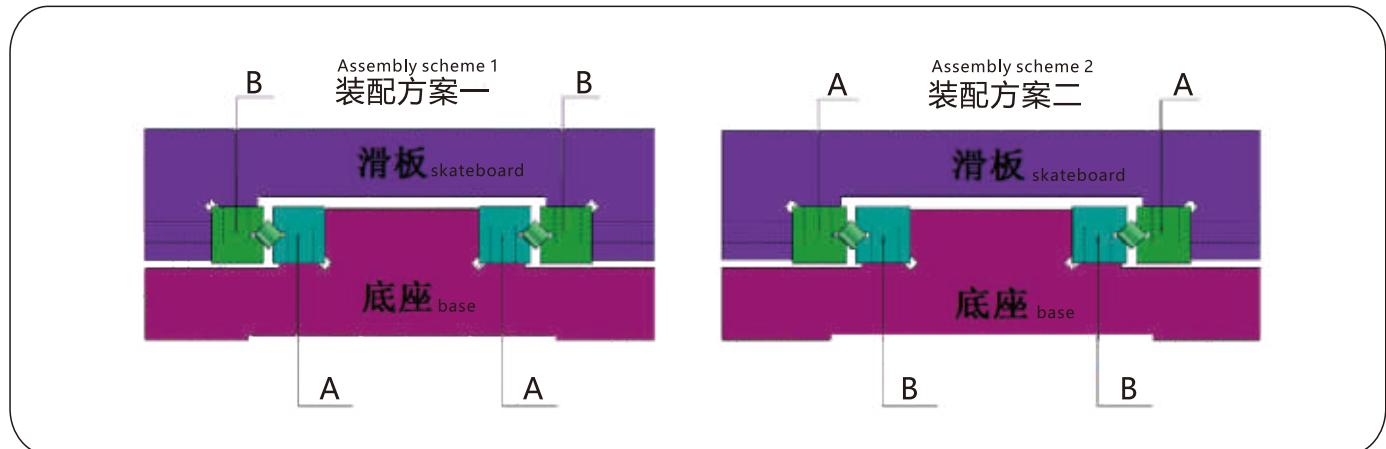

先将两根导轨A装配在滑板或底座的同一基准面上(或同一层)，再将两根导轨B装配在滑板或底座的同一基准面上(或同一层)。

◎ Installation Method of Ordinary Cross Roller Rails

Firstly, assemble 2pcs of Rail A on the same base level of the sliding plate or base; Secondly, assemble 2pcs of Rail B on the same base level of the sliding plate or base.

◎普通交叉导轨装配示意图

◎ General cross-rail assembly diagram

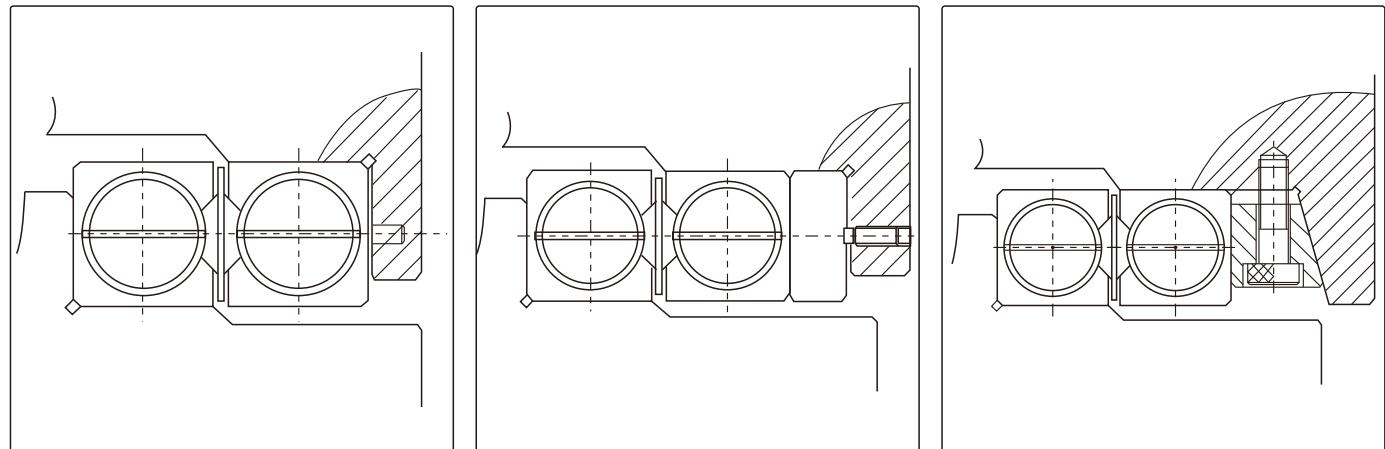

预载方法

预加载荷通常用预载调整螺钉来调整，调整螺钉与滚子设计在同一直线上。预加载荷的数值根据机床与设备不同而不同。过预载将减少导轨副的寿命并损坏轨道，且在使用过程中，圆柱滚子很容易倾斜，产生自锁现象。

Preloading method

The preload is usually adjusted by preload adjusting screws, and the adjusting bolts and rollers are designed in the same line. The value of preload varies according to different machine tools and equipment. Over preloading will reduce the life of the quide railpair and damage the rail. In the process of use, the cylindrical roller is easy to tilt, resulting in self-locking.

无预载或较小的预载

No or small preload.

需要精度和刚性时，使用压板

Press plate shall be used when precision and rigidity are required.

特别要求高精度、高刚性时，使用楔形块

Wedge blocks are used when high precision and high rigidity are especially required.

交叉滚柱导轨可在高温下运行，但建议使用温度不超过80°C。

The cross roller guide rail pair can operate under high temperature, but it is recommended that the operating temperature should not exceed 80C.

交叉滚柱导轨副的运行速度不能超过30m/min。

The running speed of the cross roller guide rail shall not exceed 30m/min.

润滑

润滑的主要目的是减少摩擦和磨损以防止过热，破坏其内部结构，影响导轨副的运行功能。当滚柱交叉导轨副的运行速度为高时($V > 15\text{m/min}$)，推荐使用N32润滑油(GB443-84)，40°C运动粘度28.8-35.2mm²/s,定期润滑或接油管强制润滑。低速时($V < 15\text{m/min}$) 推荐使用基润滑脂(GB7324-942#)润滑。

Lubrication

The main purpose of lubrication is to reduce friction and abrasion to prevent overheating, damage its internal structure and affect the operation function of the guide rail pair. When the runningspeed of the roller cross quide rail pair is high ($V > 15\text{m/min}$), it is recommended to use N32 lubricating oil (GB443-84), with a running viscosity of 28.8-35.2mm²/s at 40C, for regular lubrication or forced lubrication by connecting oil pipes. Lithium base grease(GB7324-94 2#) is recommended for lubrication at low speed ($V < 15\text{m/min}$).

防蠕动型交叉滚柱导轨副安装说明

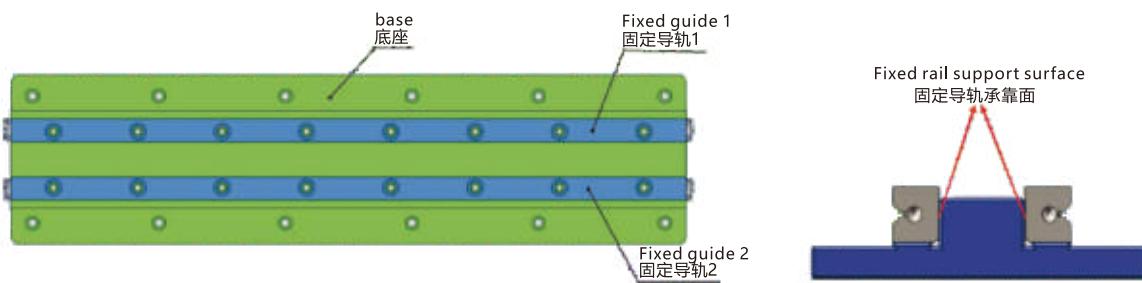

Installation Instruction of Anti-creep Cross Roller Guide Rail

1、清除工作台、底座安装基面的毛刺、瑕疵等，注意在组装过程中不要混入异物。

1 Remove the burrs and defects on the installation base surface of the workbench and base, and pay attention not to mix with foreign matters during the assembly process

2、在各个安装基准面上涂上低粘度的油，将两根导轨侧面靠紧基座凸台两侧，调整精度，锁紧螺丝。(如下图所示，安装凸台底座的两侧的固定导轨)。

2 Coating low viscosity oil, and attaching the lateral side of quide rail to the lateral side of raised step, then adjusting the precision and tightening the screw. (Install the fixing guide rails on both sides of the boss base as shown in the figure below.)

3. 保持架归位。

3 Return the cage.

3.1、将防蠕动齿轮保持架放置在固定导轨上，使保持架一端与固定导轨端面平齐。

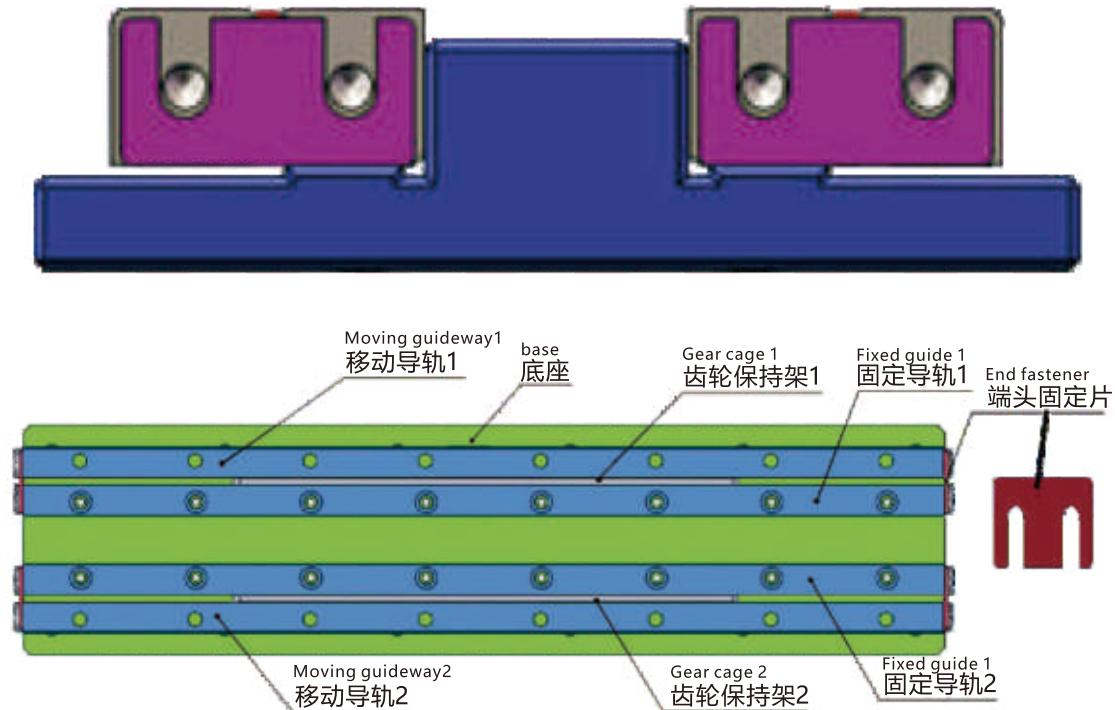

3.1 Putting the anti-creep gear cage to the fixed guide rail. The end of cage must parallel with the end of quide rail.

3.2、放置移动导轨使端头与齿轮保持架的另一端面对齐，移动导轨与齿轮保持架同时压靠向固定导轨，并左右微量晃动移动导轨，以确保保持架上的齿轮与两根导轨上的齿条完全啮合。

3.2 Make sure the end of moving guide rail parallel with the other end. The moving rail and the gear together to touch the fixed rail. Shaking the moving rail slightly, in order to make sure the gear in cage touching to the gear in quide rail.

3.3、然后将移动导轨向固定导轨左端头方向移动，直至移动到两根导轨两端头平齐，以上操作可使保持架正好位于两根导轨的正中间位置。随后，在两根导轨两端头加装双U型固定片，用端头螺钉将两根导轨与保持架固定起来。另一侧的保持架归位方法与本侧相同。

3.3 Then move the moving rail to the left end of the fixed rail until two ends paralleled. Then the cage will be in the middle of two rails. Put double U fixed plate at the end of two rails. Fix the two rails and cages by end screws. This method is suitable for returning the other side cages.

4、安装移动工作台，将工作台扣在移动导轨上，带上工作台与移动导轨上的固定螺钉(不要拧紧)。工作台预压侧面装上调节顶丝后调整预压顶丝(注意不要过分施加预压)，紧固工作台基准侧的导轨。拆掉导轨端头的固定片，然后紧固端头螺钉。将钟表式千分表安装至工作台的中心和侧面(基准面侧)。

- ①将工作台向一侧方向的行程尾端移动，轻轻紧固工作台调整端的调整螺钉。
- ②将工作台向反方向的行程尾端移动，同样轻轻紧固调整螺钉。
- ③将工作台返回中央部位，轻轻紧固中央部位的调整螺钉。

重复上述①②③三个步骤的操作直至工作台没有间隙。没有间隙时，左右移动工作台则所安装的钟表式千分表的偏差为最小值，且无变化。此时，注意不要过分施加预压。调整好预压顶丝后，将调整端移动导轨上的固定螺钉牢靠紧固。

至此，完成底座固定导轨及工作台移动导轨的整体装配!

如若有XY整体二维移动工作台，其固定导轨及移动导轨安装方法同上所述!

4 Installing the work table, cover the working table to the moving rail and attach the screws loosely on the working table and moving rail. After installing the adjusting upper screw on the lateral of working table, we can adjust the prepressing upper screw with proper stress, and then fasten the lateral rail of working table. Remove the fixed plate on the end of rail and fasten the end screws. Install the clock style dial indicator in the middle and lateral of working table.

- ① Move the worktable to the end of the stroke in one side direction, and slightly tighten the adjusting screw at the adjusting end of the worktable.
- ② Move the workbench to the end of the stroke in the opposite direction, and tighten the adjusting screw slightly.
- ③ Return the worktable to the center, and slightly tighten the adjusting screw in the center.

Repeat the operations of ① ② ③ until there is no clearance on the workbench. When there is no clearance, the deviation of the clock type dial indicator installed on the left and right moving worktable is the minimum value, and there is no change. At this time, be careful not to apply too much preload. After adjusting the pre pressing jackscrew, firmly fasten the fixing screws on the moving guide rail at the adjusting end.

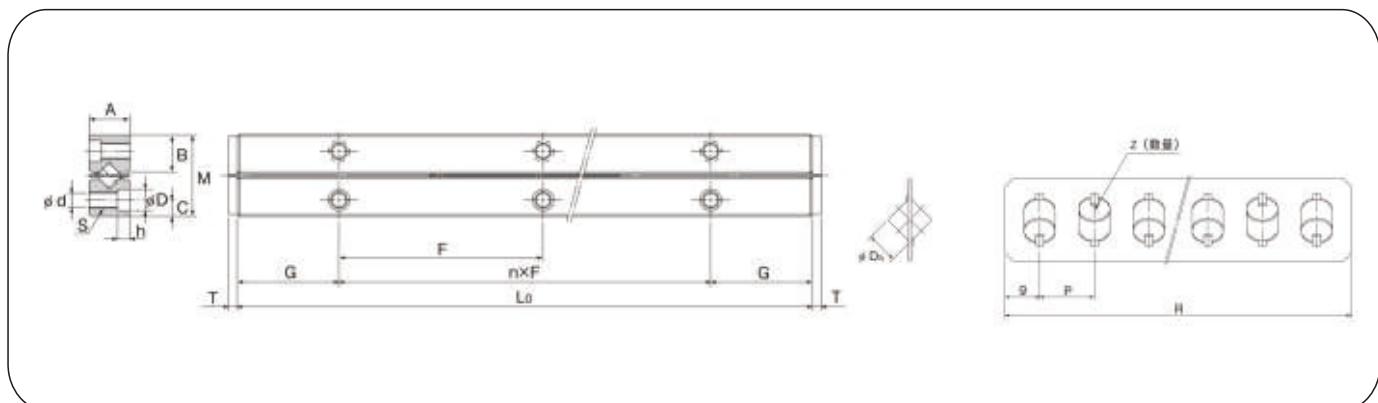

Now we finish the installation of the fixed rail and moving rail.

This method can also apply to XY two-dimensional working table.
